

PEST PREPARATION GUIDE · BUGS & INSECTS

Bug & Insect Extermination

These quick steps before your bug and insect treatment help your Terra13 technician spot activity, reach the areas insects hide, and treat safely — and good aftercare keeps them from returning.

Home & business

No-wash 14 days

Cracks & entry points

BEFORE THE TECHNICIAN ARRIVES

Tick each box as you prepare

1 Point out activity

- Where insects appear — windows, doors, damp areas, pantries, basements

2 Clean up

- Crumbs, spills, garbage areas and food shelves

3 Seal food

- Food, grains, pet food and any open packages

4 Clear access

- Baseboards, storage rooms, utility rooms and entry points

Re-entry time — ask your technician

Re-entry timing varies by pest and treatment method. Follow the time your Terra13 technician gives you before returning to treated areas.

CLEANUP & AFTERCARE

Right after treatment

- Don't wash treated cracks, baseboards or entry points for 14 days
- Sweep or vacuum up dead insects after re-entry

Keep it going

- Keep food sealed and reduce moisture
- Contact Terra13 if insects keep showing up in the same spot
